# Chapter 1

## Introduction

## Chapter 2

# Installation

## Chapter 3

# Running

# Chapter 4

## Input

Oaktree input language extends Python. Subroutines and objects related to input processing are listed below.

### 4.1 SIMULATION

SIMULATION object stores data specific to one distinct analysis.

**obj = SIMULATION (outpath, duration, step, cutoff)**

- **obj** - SIMULATION object
- **outpath** - output directory path
- **duration** - simulation duration
- **step** - time step
- **cutoff** - cutoff length below which geometrical details are not resolved

### 4.2 SPHERE

A sphere shape.

**obj = SPHERE (center, r, scolor)**

- **obj** - SHAPE object
- **center** - tuple  $(x, y, z)$  defining the center
- **r** - radius
- **scolor** - integer surface color

### 4.3 CYLINDER

A cylinder shape.

**obj = CYLINDER (base, h, r, scolor)**

- **obj** - SHAPE object
- **base** - tuple  $(x, y, z)$  defining the base center
- **h** - height along  $z$
- **r** - radius
- **scolor** - integer tuple  $(s_{base}, s_{side}, s_{top})$  of surface colors

## 4.4 CUBE

A cube shape.

**obj = CUBE (corner, u, v, w, scolor)**

- **obj** - SHAPE object
- **corner** - tuple  $(x, y, z)$  defining the minimum coordinate corner
- **u** - length along  $x$
- **v** - length along  $y$
- **w** - length along  $z$
- **scolor** - integer tuple  $(s_{xmin}, s_{ymax}, s_{zmin}, s_{xmax}, s_{ymax}, s_{zmax})$  of surface colors

## 4.5 POLYGON

A shape extruded from a polygon.

**obj = POLYGON (polygon, h, scolor)**

- **obj** - SHAPE object
- **polygon** - list  $[(x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)]$  of vertices defining a closed polygon in counter clock-wise order when looking down from a positive  $z$  point
- **h** - height along  $z$
- **scolor** - integer tuple  $(s_{base}, s_1, s_2, \dots, s_n, s_{top})$  of surface colors

## 4.6 COPY

Copy shape.

**obj = COPY (shape)**

- **obj** - SHAPE object
- **shape** - input SHAPE

## 4.7 UNION

Set theoretic union of two shapes.

**obj** = **UNION** (**shape1**, **shape2**)

- **obj** - SHAPE object
- **shape1** - first input SHAPE object
- **shape2** - second input SHAPE object

## 4.8 INTERSECTION

Set theoretic intersection of two shapes.

**obj** = **INTERSECTION** (**shape1**, **shape2**)

- **obj** - SHAPE object
- **shape1** - first input SHAPE object
- **shape2** - second input SHAPE object

## 4.9 DIFFERENCE

Set theoretic difference of two shapes.

**obj** = **DIFFERENCE** (**shape1**, **shape2**)

- **obj** - SHAPE object
- **shape1** - first input SHAPE object
- **shape2** - second input SHAPE object

## 4.10 MOVE

Move shape linearly.

**MOVE** (**shape**, **vector**)

- **shape** - input SHAPE object
- **vector** - tuple  $(u, v, w)$  defining the translation

## 4.11 ROTATE

Rotate shape about an axis.

**ROTATE (shape, point, vector, angle)**

- **shape** - input SHAPE object
- **point** - tuple  $(x, y, z)$  defining axis point
- **vector** - tuple  $(u, v, w)$  defining axis direction
- **angle** - oriented angle in degrees

**4.12 SOLID**

A solid is created in a simulation.

**obj = SOLID (simu, shape, label)**

- **obj** - SOLID object
- **simu** - simulation in which the solid is created
- **shape** - solid shape
- **label** - solid label
